Calendar Description: A must for everyone who wants to organize his personal and business appointments in an easy way. Calendar price: \$10.00 Calendar is a software which offer a FREE Option. Calendar is a simple application to create appointments. It is very simple to use and works well with Microsoft Windows systems such as Windows XP and Windows 2000. Calendar Description: A must for everyone who wants to organize his personal and business appointments in an easy way. Calendar price: \$10.00 This invention relates to a method and apparatus for the manufacture of strip material, particularly roll paper, in which a green strip is unwound from a reel and fed continuously through a series of processing stations where the strip is treated in various operations. Conventional methods for the manufacture of roll paper are based on an operation which initially forms the strip material into a web and then feeds and treats that web for the ultimate formation of the desired paper. In one of these methods, the web is formed and treated in a series of presses. In a four-stage press the first stage is a web forming press, the second is a web coating press, the third is a steam press and the fourth is a drying press. The press that performs the web coating operation may be a calender or a coater, while the press performing the subsequent steps may be a calender or a coater. One of the disadvantages of the prior methods is the relatively low speed that can be achieved. A further disadvantage is the result of the two-stage operation, which subjects the web to a first drying operation before the second pressing operation takes place. A second method utilizes a lower number of processing stations but of a larger number of press sections. In the first press
